

NEXT LEVEL. SAME MISSION.

TWIN NG

now even maintenance-friendlier,
more efficient and more flexible.

TWIN NG. NEXT LEVEL.

Put your trust in ultimate quality and reliability: the combination of innovative “lantern” coupling protection and flexible hygienic levelling feet provides decisive benefits for your processes.

LANTERNS FOR GREATER EFFICIENCY

The innovative design of the lantern guarantees fast, error-free alignment of the motor and pump shaft. Loading caused by misalignment and lateral forces is eliminated, minimising wear.

HYGIENIC LEVELLING FEET FOR ENHANCED FLEXIBILITY

The new levelling feet reduce contamination surfaces. Pumps can be easily integrated into existing systems, thanks to the flexibility offered by the levelling feet.

REDESIGN NOW MAINTENANCE-FRIENDLIER

The new design provides for effective cleaning and ensures that maintenance work can be done quickly and easily. Its compact design makes it ideal for restricted spaces.

KEEP IT PREMIUM.

Original spare parts of the highest quality from our own production for screw spindle and progressing cavity pumps.
